

## Ladder Rung covers Installation and Cleaning Guide

### Installation and cutting

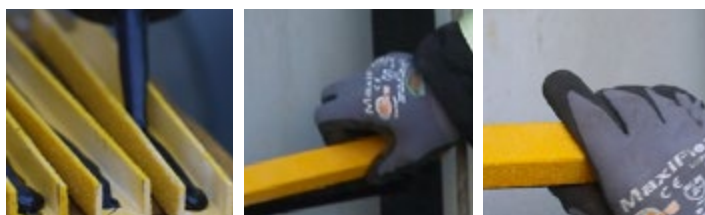

#### Fast & Easy Installation

Ladder rung covers are very quick and easy to install.

Our covers are non-load bearing, and designed for a quick and easy installation on existing ladder rungs. The only requirement for installation is a clean base.

#### Suggested installation method - Adhesive:

- Order the right size of anti-slip ladder rung cover
- Clean the rungs on the existing ladder
- Add the adhesive onto the back side of the ladder rung cover
- Squeeze the cover onto the rungs
- Slide it into the right position right away

Real Safety Ladder Rung Covers can be cut to size using orbital cutting equipment with a diamond blade. Cutting should only be carried out outdoors, where there is dust extraction or suitable ventilation and the appropriate protective equipment should be worn. A jigsaw can be used for trimming or for occasions where only a small amount of cutting is required.

#### Cut to size service

Real Safety offers cut-to-size service for this product. When you place your order, inform the technical advisor that you intend to install the product yourself and we will tailor the order to meet your specific requirements.

### Cleaning

Regular cleaning will keep your Ladder Rung Covers free of debris and looking new. Most household methods can be used such as detergents and mild degreasers provided that they are diluted with water and immediately hosed off with water. For stubborn deposits use a stiff bristle brush. High pressure cleaning may be used in an industrial environment.

**CAUTION: Do not use mops. The gritted surface will catch and retain fibres. Strong solvents are likewise not recommended.**
